## Contamination Threats to Food Supply Chain

### Food supply chain from source to consumer

**Contamination threats exist in each step of the food chain**

## What Drives Food Safety Today?

- Corporate brand protection
  - Foreign objects are impossible to eliminate
  - Rework, scrap or recalls can be very costly
  - Use of a PI may be a requirement to export
  - Problems can cost millions of \$
- Retailer policies and mandates
  - Many retailers have enhanced policies
  - Most will perform audits
  - X-ray may even be a condition to do business

Walmart 

**COSTCO**  
WHOLESALE

**TESCO**

- Compliance with industry standards
  - FDA HACCP (Hazard Analysis and Critical Control Points)
  - GFSI (Global Food Safety Initiative)
  - ISO (International Standards Organization)
  - BRC (British Retail Consortium)
  - Many industry specific standards for meat, bakery, dairy, seafood and other products
  
- US Food Safety Modernization Act (FSMA)
  - First major update to US law in 30 years
  - Increased requirements in many areas including planning, reporting, traceability, importation, supplier verification
  - New regulations are being written and applied now

## Why Food Safety is More Important Today Than Ever

- Incidents and recalls are very public
  - Mass, easy communication via the internet
  - Consumers are more educated and concerned
- Detection systems more capable and less costly
  - Metal detection sensitivity constantly improving
  - X-ray systems can find more types of objects
  - Systems are very easy to use and own
- Heading toward zero tolerance
  - 3-5 mm was OK, now 0.8mm can be detected
  - Recognition that all hazards must be detected, they can never be eliminated completely
